Docket No: 1313/1E290-US2

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Application of: James WESTPHAL; John P. ERSPAMER; Shiu-Kang Laurence LI

Serial No.: 09/827,703 ~~719,338~~

Art Unit: 3761

Confirmation No.: 7143

Filed: June 8, 1999

Examiner: J. Webb

For: UNITARY ABSORBENT STRUCTURE CONTAINING SUPERABSORBENT POLYMER

PENDING CLAIMS AFTER AMENDMENT

1. A unitary absorbent structure, comprising:
 - an upper fibrous layer having a liquid acquisition zone extending to one surface and a liquid distribution zone extending to another surface;
 - a lower fibrous liquid storage layer in liquid communication with the distribution zone surface of said upper layer, said storage layer including superabsorbent polymer particles; and

a containment layer surrounding the storage layer and extending to outer edges of said structure, said containment layer containing fibers and superabsorbent polymer particles of said storage layer against a distribution zone surface of the upper layer, and wherein the containment layer is sealed to at least one lateral edge of said structure.

2. The structure of claim 1 wherein said upper fibrous layer is airlaid and the acquisition zone has a lower density than the distribution zone.

3. The structure of claim 1 wherein said lower storage layer is an airfelt layer.

4. Cancelled.

5. The structure of claim 4 wherein said containment layer is sealed directly to the distribution zone surface of said upper layer.

6. The structure of claim 4 wherein said containment layer is sealed directly to the lower storage layer.

7. The structure of claim 1 wherein said containment layer is selected from the group consisting of thermoplastic film, nonwoven and woven tissue.

8. The structure of claim 7 wherein said thermoplastic film is selected from the group consisting of polyethylene and polypropylene.

9. The structure of claim 3 wherein said airfelt layer is lightly bonded.
